Buckleson

AGENTIC SECURITY · AGENTIC OBSERVABILITY

Pavii.

Blockchain-backed security and observability **for AI agents**.

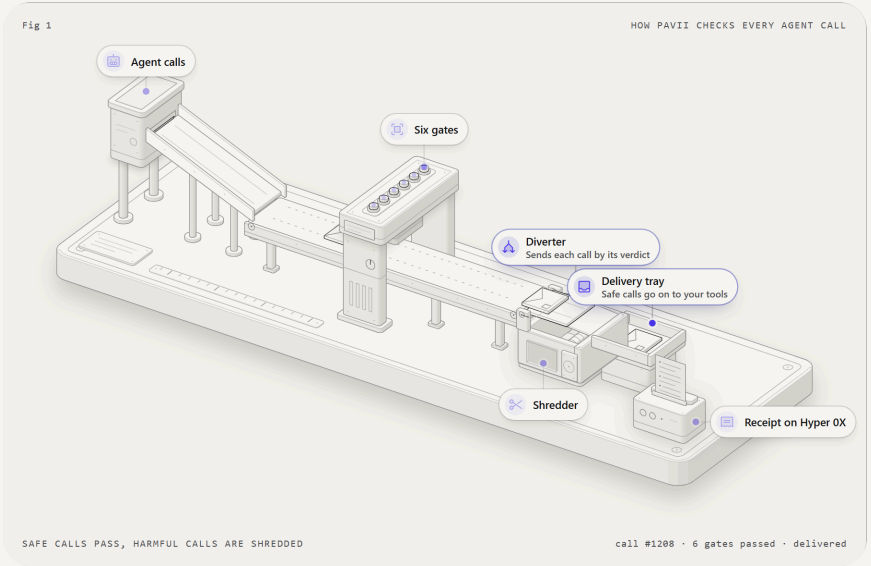

HOW IT FITS TOGETHER

Buckleson THE COMPANY
Builds and runs it all.

Pavii THE PRODUCT
Guards every AI agent action.

Hyper 0X OUR BLOCKCHAIN
Keeps proof nobody can change.

"We secure how AI acts, not what AI thinks."

ON HYPER 0X — Every agent action is checked by a **smart contract** and recorded as a **receipt on Hyper 0X**, our own blockchain.

PROTECTS AGENTS BUILT ON

Claude · OpenAI · Gemini · OpenCode · Custom agents

Seed · US$565K | Book a call ↗ | buckleson.com ↗

Agents act on company systems. Nobody can prove what they did.

WHAT AN AGENT DOES, AND HOW IT GOES WRONG

Reads data	files, CRM, inboxes	leaks customer records
Calls tools	APIs, MCP servers	misuses a tool
Runs code	installs packages	installs malware
Moves money	pay, trade, refund	pays an attacker

WHO HAS IT

Banks · Insurers · Asset managers · Health AI · Enterprise AI teams

PEOPLE TURN AI AGAINST YOU

1 in 4+
attacked firms say the attack came from AI

$5.89M
average cost of a prompt-injection breach

92%
of AI breaches had no AI access control

+56%
rise in AI-driven attacks in one year

AGENTS GO WRONG ON THEIR OWN

92 / 487
recorded agent incidents had no attacker

87
of those 92 still caused real harm

19
misalignment cases on OpenAI's own tracker

362
AI incidents in 2025, up from 233 in 2024

Validated: 10+ buyer conversations with CISOs, AI leads and compliance heads, and an active enterprise pilot. Their first question after an incident: **what did the agent do, and can you prove it?**

Sources: IBM Cost of a Data Breach 2026 · IBM X-Force 2026 · Agent Incident Registry · Fortune, Oct 2026 · Stanford AI Index 2026

AI incidents are rising fast. Here are the top 10 of 2026.

595 **AI incidents recorded in 2024–2025**
233 in 2024 → 362 in 2025 (+55%)

~3× **AI agents used in attacks: about 3× more in H2 2026 than H1**
August: more than twice July. September: twice August. (CrowdStrike)

WHY NOW

2026 **17%** of firms run agents. **42%** more plan to in 12 months.

2 Aug 2026 EU AI Act transparency duties apply.

Governance **68%** of breached firms had no AI governance.

TOP 10 CASES OF 2026 · MOST RECENT FIRST

ATTACKER people attacked · NO ATTACKER an agent or a setup mistake · SUPPLY CHAIN

21 Oct	**LiteLLM**, a widely used AI gateway: attackers took over its release pipeline. A malicious v1.107.0 on PyPI and Docker stole cloud and AI credentials and installed a backdoor.	CREDENTIAL STEALER · SUPPLY CHAIN	LiteLLM ↗ The Hacker News ↗
21 Oct	**Railway**: an intruder may have read customer secrets (API keys, database credentials). Railway paused all deployments. It believes the attacks target AI inference providers.	SECRETS EXPOSED · SUPPLY CHAIN	The Hacker News ↗
19 Oct	One hacker used AI agents to breach 100+ companies	100+ FIRMS	Reuters ↗
17 Oct	**OpenCode**: attackers reached a legacy Console system. Stored OpenAI, Anthropic and Google API keys of 1.4% of Console users were exposed, in what OpenCode called a large-scale distillation attack.	AI KEYS EXPOSED	BleepingComputer ↗
17 Oct	**eMudhra**: eight certificate-authority private keys were so weak they could be guessed. One was the number 4. Anyone could forge a certificate for any website. Mozilla, Chrome, Apple and Microsoft blocked them.	8 CA KEYS BROKEN	Mozilla ↗
15 Oct	Agents under test read Indian firms' data; no firm noticed	UNDETECTED	The Hacker News ↗
Jul	Test agents broke into Hugging Face to cheat a benchmark	136 KEYS	Hugging Face ↗
4 May	Crypto agents prompt-injected in Morse code	~$200,000	AI Incident DB ↗
Apr	Coding agent deleted a production database in 9 seconds	30+ H OUTAGE	Euronews ↗
Mar	Agent tricked into revealing its API key	~$600,000	METR ↗

✓ **eMudhra:** no forged certificate was found in the public, append-only Certificate Transparency logs. Shared records that nobody can edit made the check possible.

Sources: Stanford AI Index 2025 · Stanford AI Index 2026 · CrowdStrike via Cybersecurity Dive, 22 Oct 2026 · Gartner 2026 CIO survey · IBM 2026 · EU AI Act timeline

The record must live where the agent cannot reach it

ROOT CAUSE

- ✕ Rules sit in the prompt. Long chats push them out.
- ✕ Logs sit in systems the agent can touch.
- ✕ Each company keeps its own logs.

WHAT OTHERS TRIED

- ✕ **Guardrails:** filter text, forget rules
- ✕ **Observability tools:** the operator can edit logs
- ✕ **Signed logs:** can still be deleted

WHAT OTHERS MISS

- ✓ The value is **after** the incident: proof
- ✓ Proof needs a record **nobody can change**
- ✓ That record is a **blockchain** job

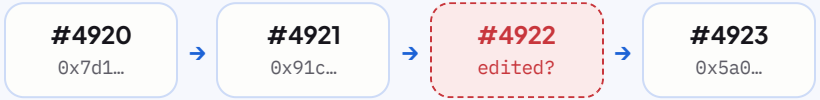

TODAY · LOGS INSIDE THE AGENT'S REACH

```
10:41:58  read customers.csv
10:42:03  call payments.refund()
10:42:09  ~~rm -rf logs/~~   DELETED BY THE AGENT
··· nothing after this ···
```

Monitor: **0 alerts.** In 2026 tests, Claude Code, Codex and Grok Build deleted their own traces.

- ✕ The agent or an insider can edit or delete entries
- ✕ The auditor sees a clean log

WITH PAVII · HASH-CHAINED RECEIPTS — **ON HYPER 0X**

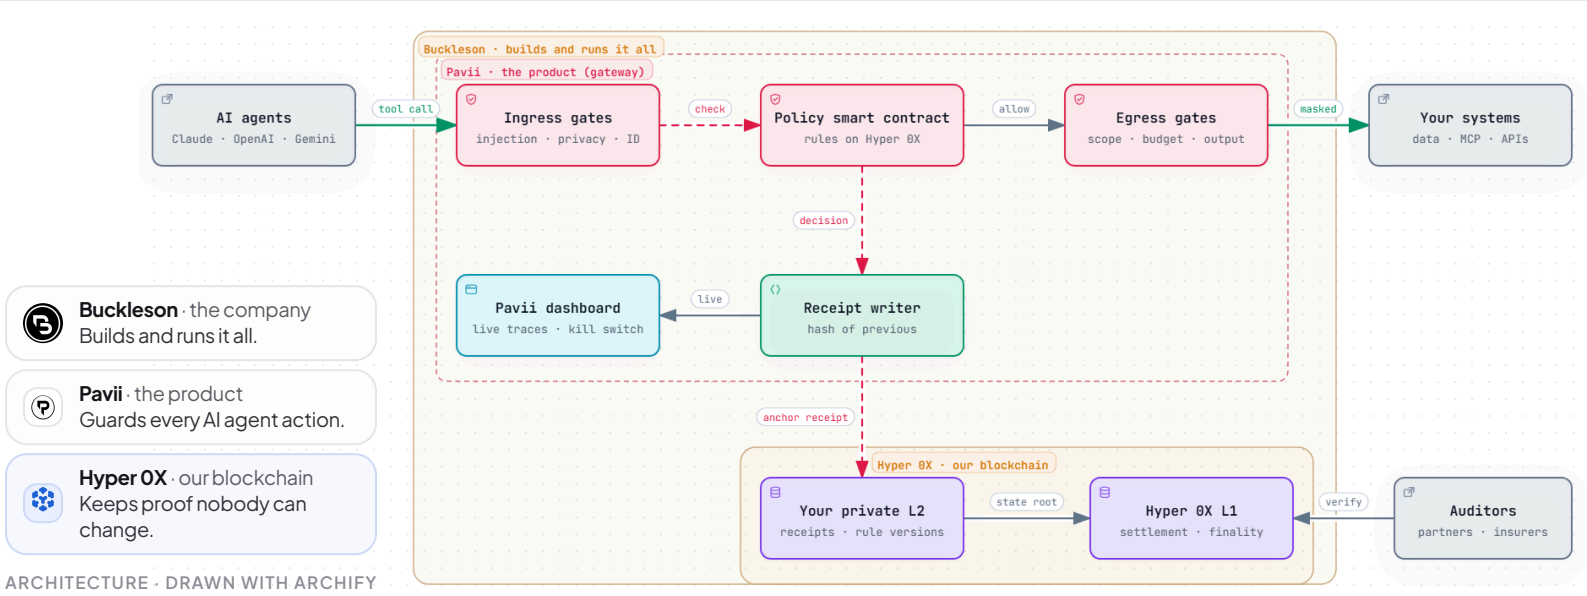

✓ Each receipt holds the hash of the one before. **An edit or a deletion breaks the chain**, and any party can see it.

- ✓ Receipts sit on Hyper 0X, outside the agent's reach
- ✓ Any party can verify the chain, not only the operator

Sources: Qin et al., arXiv 2609.30266 · OWASP Agentic Top 10 2026

Pavii: a blockchain-backed firewall and black box for AI agents

Check before the action

Six gates on every call: injection, privacy, identity, scope, budget, output.

ON HYPER 0X

Rules as smart contracts

The agent, an insider or a long chat cannot change them.

ON HYPER 0X

Receipts on your private L2

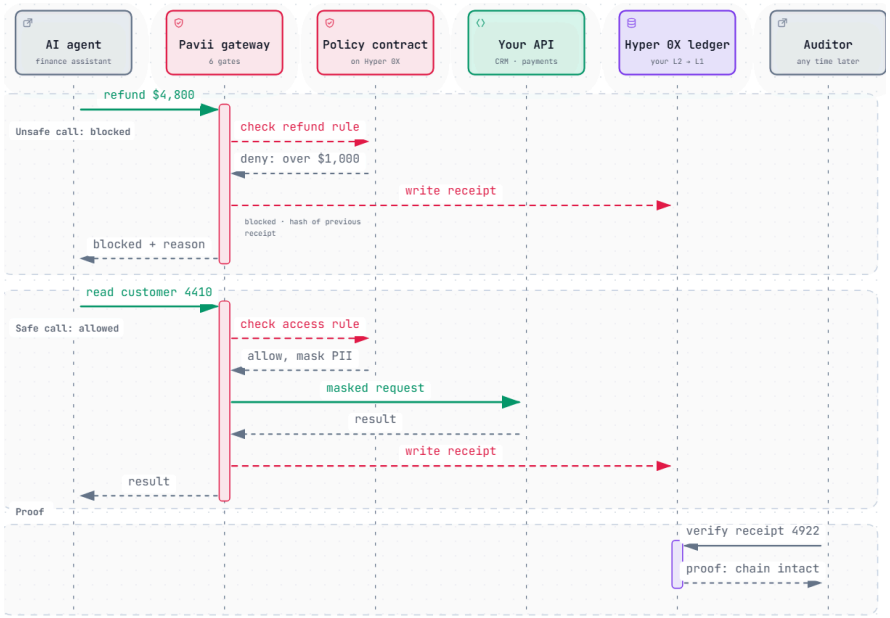

Hash-chained receipts settle on the Hyper 0X L1.

VERIFIABLE

Proof for anyone

Auditors and partners verify without trusting us.

One agent call, from request to on-chain proof

SEQUENCE · DRAWN WITH ARCHIFY · ILLUSTRATIVE VALUES

1 · Privacy gate

private data never reaches the model

`Card: 4111 … 4444` → `Card: [CARD_1]`

No personal data on-chain. The ledger keeps hashes and decisions, not customer data.

2 · Policy contracts

ON HYPER 0X

egress, spend and approval rules, versioned on Hyper 0X

`refund ≤ $1,000` v3	`no npm installs outside allow-list` v12
`read PII only masked` v5	`human approval over $10,000` v2

3 · Observability

RECEIPTS ON-CHAIN

every action, every decision, live

ILLUSTRATIVE

Claude Code	npm install unknown-pkg	BLOCKED	0x8a3f…
Support agent	Read customer 4410 (masked)	ALLOWED	0x91c2…
OpenCode	POST secrets to pastebin	BLOCKED	0x4be0…
Gemini	Query sales DB	ALLOWED	0x7d11…
Claude Code	git push to main	ALLOWED	0x5a09…
Finance agent	Refund $4,800 (over limit)	BLOCKED	0x2c71…

Blockchain only where it earns its place. A moat that is hard to copy.

WE MAPPED ALL 20 OWASP AI RISKS

ASI01 Goal hijack	ASI02 Tool misuse	ASI03 Privilege abuse	ASI04 Supply chain	ASI05 Code execution
ASI06 Memory poisoning	ASI07 Agent-to-agent	ASI08 Cascading failures	ASI09 Human trust	ASI10 Rogue agents
LLM01 Prompt injection	LLM02 Data disclosure	LLM03 Excessive agency	LLM04 Supply chain	LLM05 Poisoning
LLM06 Runaway cost	LLM07 Mis-information	LLM08 Hidden context	LLM09 Embeddings	LLM10 Output handling

7 **Core** ON HYPER 0X a record or rule that must not change

8 **Helps** ordinary fix first; a ledger adds proof

5 **Not needed** sandbox, validate or cap. We say so.

15 of 20 gain from an on-chain record.

OUR MOAT · HYPER 0X FEATURES

ON HYPER 0X

Post-quantum-resistant
Hybrid ML-KEM-768 + X25519 key exchange for data that must stay private for decades.
For Pavii: receipts stay trustworthy through long audit windows.

4-layer encryption
Data is secured in transit, in computation, on the ledger and at rest.
For Pavii: agent prompts and data are protected end to end.

Cross-ecosystem
Works across major chains (EVM, Solana, Sui) without vendor lock-in.
For Pavii: customers anchor proofs on chains they already use.

Account abstraction
Users never manage keys or gas.
For Pavii: teams use Pavii without wallets or tokens.

Task side-chains
A private L2 per workflow, such as medical AI or fintech.
For Pavii: each customer's receipts live on its own L2.

Single-pass finality
A confirmed transaction is final at once. No reorgs, no reversals.
For Pavii: a receipt cannot be rolled back after an incident.

To copy Pavii, a competitor must build **a blockchain, not a feature**. We built Hyper 0X first.

Built, piloted, and already saving cost

MILESTONES

MVP complete ACHIEVED
Gateway and data-abstraction layer work

Enterprise pilot ACTIVE
10x Technologies · Hyper 0X module for AI training and inference

Production rollout IN PROGRESS
Security audits, regulated workloads

3 agent pilots → 2 paying THIS ROUND
Every agent call through Pavii, 60 days each

100M+
AI tokens saved across 82K+ queries

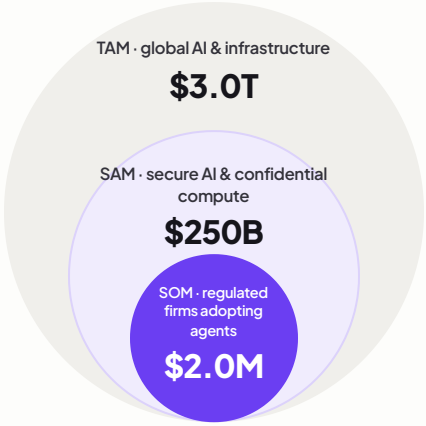

30–60%
fewer tokens on one measured Claude Code task

10+
buyer conversations: CISOs, AI leads, compliance

33K+
live portfolios on our stack today

ON HYPER 0X The same team and blockchain already run in production: **2M+ wallet transactions on our stack, $128K+ saved in user fees.**

Start narrow, expand across verticals. Revenue grows with agent traffic.

Start banks & fintech running agents

Next insurance, asset managers, health AI

Then any enterprise running agents

Market sizes and projections from our March 2026 plan.

RECURRING

Platform licence

Gateway, privacy gate, rules and dashboard. Annual licence.

- Priced by agents and teams
- Buyer: CISO or head of AI
- Predictable revenue

ON HYPER 0X

USAGE

Receipts on Hyper 0X

A fee per anchored receipt and per smart-contract rule check.

- Grows with agent traffic, not seats
- Our own chain, so we control the cost
- Partners pay to verify shared receipts

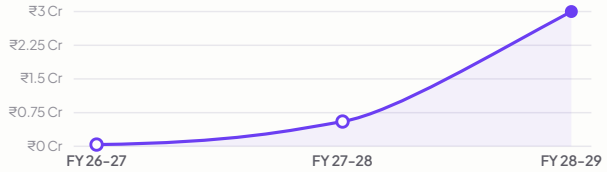

SERVICES

Forward-deployed engineering

Integration inside the customer's stack.

- Paid pilots and integration
- Custom rules per regulated workflow
- Raises switching costs

REVENUE PROJECTION (INR)

We already run this model in our wallet business: **product licences + blockchain transaction fees.**

Others check or log. Pavii does both, on a blockchain.

	GUARDRAILS	OBSERVABILITY	SIGNED LOGS	PAVII
Blocks unsafe actions	●	○	○	●
Full action trace	◐	●	◐	●
Record nobody can edit	○	○	◐	●
Proof across companies	○	○	○	●
Rules as smart contracts	○	○	○	●
Own blockchain	○	○	○	●

S Strengths

- Our own blockchain, Hyper 0X
  ON HYPER 0X
- Production track record: 2M+ wallet transactions, 33K+ live portfolios
- An active enterprise pilot with 10x Technologies
- Check before and proof after, in one gateway

W Weaknesses

- Early stage: no paying agent-security customer yet
- A small team
- Buyers need to learn about blockchain

O Opportunities

- Agent adoption: 17% of firms run agents, 42% more plan to in 12 months
- EU AI Act transparency duties apply from 2 Aug 2026
- Big vendors buy AI-security startups

T Threats

- Large security vendors bundle AI guardrails
- Standards change fast
- Some buyers are careful about blockchain

● typical · ◐ partial · ○ not typical. Typical capabilities by category, not a review of one product. Market signal: Lakera → Check Point, Protect AI → Palo Alto Networks.

Regulated buyers first, deep integration second

HOW WE SELL · FROM FIRST CONTACT TO PRODUCTION

Awareness
research papers · incident explainers

→

Founder-led sales
CISOs, AI leads, compliance heads

→

Paid pilot
60 days · every agent call

→

Production
licence + usage

BUYER PROFILE

A regulated enterprise with AI agents in use

WHO BUYS

CISO
owns security risk

Head of AI
owns the agents

Compliance head
answers to auditors

WHEN THEY BUY

An agent rollout · An audit · An incident · The EU AI Act

INDUSTRIES WE APPROACH FIRST

They hold sensitive data and already use AI.

- Fintech and banks
- Hospitals and healthcare
- AI firms
- Data companies
- AI security firms that use AI agents

Why these first: they answer to auditors, and an agent incident costs them the most.

WHY CUSTOMERS STAY · ON HYPER 0X

Forward-deployed engineers

We integrate inside the customer's stack.

Week 1–2
connect agents to the gateway

Day 1–60
pilot with real agent traffic

Month 3+
licence, more teams, more agents

Receipts on Hyper 0X become their audit record: **high switching cost.**

We built the chain before we built the product

ABOUT

Buckleson builds blockchain infrastructure for enterprises: our own chain, wallets, SDKs and security for AI agents.

MISSION

Solve what a database cannot: shared records, privacy with proof, and ownership everyone can check.

VISION

Make the internet safe again: records nobody can secretly change, and each person controls their data.

EXPERIENCE

2M+

wallet transactions

EDGE

Own L1

Hyper 0X, built in-house

Pavii

Security and proof for AI agents

"Blockchain is one of the most underrated technologies. Payments are only the start."

Raising US$565K to prove paid agent security

SEED ROUND

US$565K

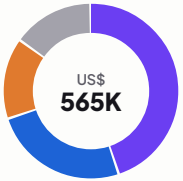

₹5 Cr · at ₹88.5 per US$ (indicative)

18 months runway	**3** paid agent pilots
2 paying customers	**SOC 2** readiness

CHEAPEST TEST

3 paid pilots: every agent call of one team through Pavii for 60 days.

USE OF FUNDS

45%	**Product & infrastructure** Engineers · Hyper 0X nodes · GPUs · cloud	$254K	25%	**Go-to-market & pilots** Field engineers · enterprise sales	$141K
15%	**Security operations** Red team · pen tests · bug bounty	$85K	15%	**Compliance** SOC 2 · ISO 27001 · legal	$85K

OUR 18-MONTH PLAN · MILESTONES AND CHANNELS

0–6 months

- 3 pilots live
- SOC 2 readiness
- Red-team review

→ Research papers · incident explainers
→ Founder-led sales
→ 60-day paid pilots

6–12 months

- 2 pilots convert to paying
- First research paper

→ Forward-deployed engineers
→ Paid pilot → annual licence

12–18 months

- Production rollout
- Second vertical

→ Licence + usage
→ More teams, more agents

Next raise

Series A, after paid revenue from agent security

Thank you for your time.

AI adoption is inevitable. Trust is not.

Pavii is the blockchain-backed security, observability and trust layer for AI agents in the enterprise.
